A college stores the names of students in an ArrayList. The administrator wants to display all student names using an Iterator instead of a for loop.

Write a Java program to:

Create an ArrayList of student names.

Read 8 student names from the user.

Traverse the list using an Iterator.

Display each student name on a separate line.

Display the total number of students stored in the list.

Your Code

```
1 import java.util.*;
2 public class Main {
3     public static void main(String[] args) {
4         Scanner sc = new Scanner(System.in);
5         ArrayList<String> students = new ArrayList<>();
6         System.out.println("Enter 8 student names:");
7         for (int i = 0; i < 8; i++) {
8             students.add(sc.nextLine());
9         }
10        System.out.println("\nStudent Names:");
11        Iterator<String> it = students.iterator();
12        while (it.hasNext()) {
13            System.out.println(it.next());
14        }
15    }
16 }
```

Input

kishore
darshan
avinash
raam
.....

Output

Student Names:
kishore
darshan
avinash
raam
krithika

QUESTIONS

Q1

A college stores the names of students in an ArrayList. The administrator wants to display all student names using an iterator instead of a for loop. 10 marks

Q2

Remove Even Numbers Using Iterator 10 marks

Q3

Product Price Analysis Using Iterator 10 marks

Q3 Product Price Analysis Using Iterator

10 marks

A supermarket stores the prices of various products in an ArrayList<Double>. The manager wants to analyze the prices using an Iterator.

Write a Java program to:

Create an ArrayList<Double>.

Read the prices of 10 products from the user.

Traverse the list using an Iterator.

Calculate and display:

Total price of all products.

Average product price.

Highest product price.

Display all product prices using the Iterator.

Your Code

```
1 import java.util.*;  
2 public class Main  
3 {  
4     public static void main(String[] args)  
5     {  
6         Scanner sc = new Scanner(System.in);  
7         ArrayList<Double> prices= new ArrayList<>();  
8         System.out.println("Enter the prices of 10 products:");  
9         for(int i=0 ; i<10 ; i++)  
10         {  
11             prices.add(sc.nextDouble());  
12         }  
13     }  
14 }
```

Input

6000
7000
8000
9000
1500

Output

Enter the prices of 10 products:

product Prices:
1000.0
2000.0
3000.0

Main.java

Share

Run

Share code

Output

Clear

```
1- import java.util.*;
2- public class Main {
3-     public static void main(String[] args) {
4-         Scanner sc = new Scanner(System.in);
5-         ArrayList<Integer> ids = new ArrayList<>();
6-         System.out.println("Enter 10 Employee ID numbers:");
7-         for (int i = 0; i < 10; i++) {
8-             ids.add(sc.nextInt());
9-         }
10-        Iterator<Integer> it = ids.iterator();
11-        while (it.hasNext()) {
12-            int id = it.next();
13-            if (id % 2 == 0) {
14-                it.remove();
15-            }
16-        }
17-        System.out.println("\nEmployee IDs after removing even
            IDs:");
18-        for (int id : ids) {
19-            System.out.println(id);
20-        }
21-        sc.close();
22-    }
}
```

Enter 10 Employee ID numbers:

```
1
2
3
4
5
6
7
8
9
10
```

Employee IDs after removing even IDs:

```
1
3
5
7
9
```
